

Requirements Table

Personal Subscription & Recurring Expense Auditor — Problem Statement #32

Actors: Individual User, Finance Auditor, Banking Data Provider

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall analyze transaction logs to identify recurring billing patterns and project total monthly subscription expenditure.	High	Pass: Recurring service identified and renewal date logged. Fail: One-time payment misclassified as subscription.	Given as the sample requirement; automatic detection of recurring charges is the core value proposition of the auditor app.
FR-002	Functional	The system shall send the user a renewal alert notification at least 3 days before each detected subscription's projected renewal date.	High	Pass: For every active subscription, a notification is logged and delivered 3+ days before the renewal date. Fail: Any active subscription's renewal date passes with no prior alert sent.	Advance warning is the feature that lets a user actually act (cancel or budget) before being charged again; a late or missing alert defeats the purpose of the app.
FR-003	Functional	The system shall calculate and display the user's total monthly subscription burn rate (sum of all active recurring charges), recalculated whenever a new transaction is imported.	High	Pass: Displayed burn rate equals the sum of all currently active subscription amounts, normalized to a monthly cadence, and updates within the same session after an import. Fail: Burn rate is stale after an import, or omits/double-counts a subscription.	A single, trustworthy "how much am I spending on subscriptions" number is the headline insight users open the app for; it must always reflect the latest imported data.
FR-004	Functional	The system shall provide a one-click cancellation guide (step-by-step instructions or a direct merchant cancellation link) for each identified subscription.	Medium	Pass: Selecting "Cancel" on any detected subscription opens a guide or link specific to that merchant. Fail: No guide/link is available, or it points to the wrong merchant.	Detecting a subscription is only half the value; users need a low-friction path to act on that insight, which is the app's differentiating feature over a plain bank statement.
FR-005	Functional	The system shall allow a Finance Auditor to review a user's flagged subscription list and manually reclassify a mislabeled transaction (subscription vs. one-time charge), with every change logged for audit purposes.	Medium	Pass: A reclassification updates the transaction's category, is timestamped, and is attributed to the reviewing Finance Auditor in an audit log. Fail: A reclassification is applied with no audit record, or the change is not reflected in the user's dashboard.	Automatic pattern detection will misclassify some charges (e.g., irregular billing intervals); a human review-and-correct path with an audit trail is required for accuracy and financial accountability.
NFR-001	Nonfunctional	Financial transaction imports (CSV/OFX) must parse securely without storing raw banking credentials in cleartext.	High	Pass: Benchmarking tests confirm target latency and security standards under simulated peak load.	Given as the sample requirement; the app handles sensitive financial data, so credential and transaction security is non-negotiable for user trust and regulatory compliance.
NFR-002	Nonfunctional	The system shall encrypt all stored financial transaction data at rest (AES-256 or equivalent) and permanently delete a user's financial data within 24 hours of an account-deletion request.	High	Pass: Stored transaction records are confirmed encrypted at rest, and a deletion request results in verified, irreversible removal within 24 hours. Fail: Any transaction record is found unencrypted at rest, or data persists past 24 hours post-deletion request.	Personal financial data is highly sensitive; encryption at rest and a bounded, verifiable deletion guarantee are baseline expectations for a finance app and align with data-privacy regulations (e.g., GDPR-style right to erasure).
